DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1 – 16, 18 – 23, and 47 – 60 are drawn to a mobile device/
terminal device/communication device that detects an interruption in a
broadcast and subsequently records the broadcast.
 - II. Claim 17 drawn to a recording server classified in class 386 subclass 46
 - III. Claims 24 – 46 are drawn to a communication control device detects an
interruption in a broadcast to a mobile terminal and subsequently
commands an external server to record the broadcast
2. Regarding Groups I and III, This application contains claims directed to the
following patentably distinct species: an information terminal device and the
communication control device. The species are independent or distinct because the
species are mutually exclusive. The information terminal **itself detects** or **locally
detects** an interruption in the broadcast and records the broadcast into said terminals
memory whereas the communication control device remotely monitors a mobile device
i.e. **remotely detects** for an interruption in the broadcast and subsequently sends
commands to an external recording server to record the broadcast. The information
terminal claims comprise the local detection limitation and not the remote detection
limitation and the communication control device claims comprise the remote detection

Art Unit: 2618

limitation and not the local detection limitation thus making the claims mutually exclusive.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

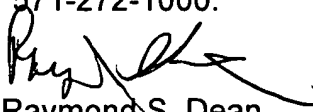

3. Regarding Group II, Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper. The claim does not claim a mobile device or information terminal thus moving out of class 455 and into class 386.

Art Unit: 2618
